# Chapter 1 Introduction

1.1 Features

❑ The customer display is Vacuum Fluorescent Displays which display 20 columns and 2 lines, each columns is 5x7 dots.

❑ Blue-green fluorescent color is easy on the eyes.

❑ The display panel is movable so that it can be adjusted for the best viewing angle.

❑ The customer display have different height by adjusting the support.

❑ The interface of customer display is RS-232, with baud rates select from 9600 or 19200 bps.

❑ The customer display have provided the pass through function to reduce the cable connection.

❑ The user defined and international character sets are the standard of customer display.

❑ Supports 10 command modes, with EPSON command mode set as default

❑ Supports power from 5V to 12V, it prevents any mindless use of improper power input to cause malfunction

❑ Easy configure & various settings through its free powerful set up software i.e. Welcome message and plenty of code pages setting and others setting.

❑ Control boards design in top panel to prevent water or wet counter surface may damage from the bottom.

❑ 2nd Choice round-shape mini base for space-saving, stable and ingenious

❑ Panel is structured to easy-detachable and available for wall mounting install and OEM

Attention
1. This specification shall apply only to the product(s) coming along with this manual inside.
2. This manual may not apply to the previous or later product(s).
3. This specification may be modified without any notice. If it is necessary for "customers" to have a latest manual about specification, please inquire your suppliers.

1.2 Outline

The customer display outline has included of three parts: the panel, the support, and the interface adapter
The standard VFD customer display should include following accessories:

Item	Description	Dimension (mm)	Q'ty
1	Panel of customer display	220(L)*87(W)*50(H)	1
2	Support	130	2
3	D-SUB 9PIN RS-232 Cable	1600	1

Chapter 3 Interface

3.1 Interface

Specifications:

Data Transmission Method : Asynchronous Serial.
Handshaking : DTR/DSR Control
Default Protocol : 9600/19200 bps, non-parity, 8 data bits, 1 stop bit.

Communication Protocol

1. Receive Data.

The DTR signal is as follows:
[HIGH]   This indicates that the display isn't ready to receive data.
It depend on the following conditions:

❑   The period from when the power is turned on to when the printer first becomes ready to receive data.
❑   When the remaining space in the receiving buffer becomes 128 bytes or less.
❑   When the DTR signal of the printer is HIGH when the printer is selected using the command.

[LOW]   This indicates that the display is ready to receive data.
It depends on the following conditions:

❑ When the printer first becomes ready to receive data after power-on.
❑ When the remaining space in the receiving buffer becomes 128 bytes or more.
❑ When the DTR signal of the printer is LOW when the printer is selected using the command.
2. Transmit Data.

After confirming the DSR is LOW, data is transmitted to printer.

3.2 Interface Conversion Adapter

The interface adapter section has connectors for the display panel, the printer, the power supply, and host computer. All the data transmitted from the host computer will be received by the display. If this data is for the display, the data will be processed, and if it is for the printer, it will be transmitted to the printer. Whether the data is for the display or the printer can be switched using the peripheral device selection command.

Chapter 6 Setup Software Utility Guide

1. Power on , and waiting test page of EEPROM test, Baud rate, and Command page. And you may set up the customer display by "VFD_Setup.exe" Utility.

2. To execute "VFD_Setup.exe" for setup communication between display and Utility
    The Baud Rate will show on states page of the Utility (Note: You may check it when power on the display)

3. "Get Setting From VFD" button
    To get all setting from the display and it'll refresh the "VFD_Setup.exe" utility

4. "Character Type"/ "Command Mode"/ "BaudRate Select"/ "Passthru Mode"
    Please refer to Chapter 4-5 user manual

5. "Set All Default" button

To show default setting, the Default table is,
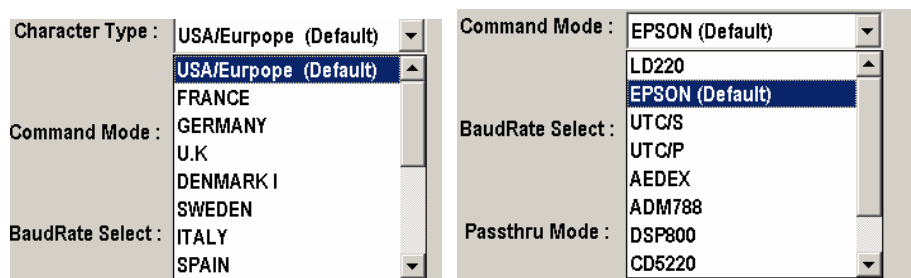

Character Type	: USA
Command Type	: EPSON
BaudRate Setting	: 9600/n/8/1
Passthru Mode	: None
Welcome msg line1	: *** VFD DISPLAY ***
Welcome msg line2	: **HAVE A NICE DAY AND THANK YOU**

6. Welcome Msg

Welcome Msg line1 maximum 20 characters, line 2 maximum 20 characters, total of 40 characters.
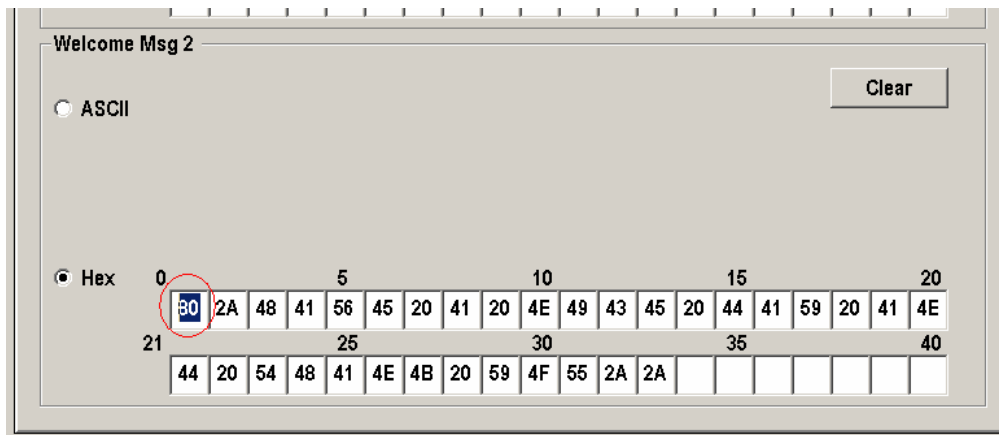

a. ASCII mode

You can type the character by keyboard (0x20h ~ 0x7Fh), if you press clear icon, it will clear the all Msg characters on AP.

b. Hex mode

Hex mode can define the character from 0x20h to0xFFh，the range 0x80~0xFF

which depends on the code page table.

Like the first character (0x80)，in default code page will show ς on display。

7. "Download setting to VFD" button

This button is to download the setting from VFD_Setup.exe to display.
*After success dialog "Download O.K ! Please restart !" message popped up, you must restart display for enable new setting.

8. "Save" button

To save user's setting in file, example: below picture to save file name as "Rename-GOODLUCK" file set for Welcome Msg.

P.S : The default setting named "VFD.vfd" which can't be made any setting change.

9. "Load' button

For saving your time, you could load any setting file which you made before to the display. You must restart the display for enable the new settings.
